

Works with

**SONOS**

# What is “Works with SONOS CONNECT”?

This is the feature that allows you to do some basic automation programming between your AV Receivers and SONOS CONNECT.

You just hit play on the SONOS App, then the AV Receiver is going to catch up the playback and wakeup, changing the input, and changing the volume *automatically*.

# Specification of our “Works with SONOS”

## 1. Need

- Wi-Fi router
- Sonos Connect
- Sonos App
- ONKYO/PIONEER product which support SONOS CONNECT

# Specification of our “Works with SONOS”

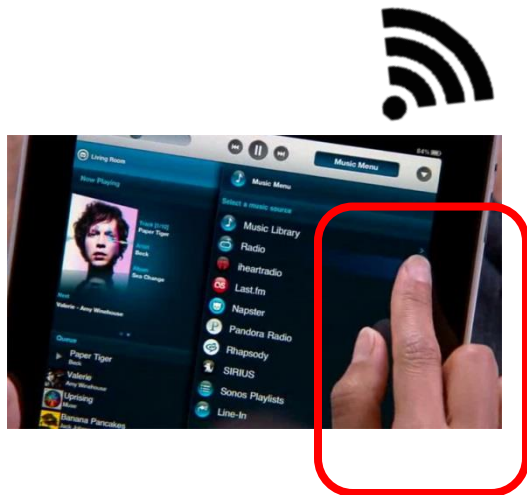

2. Everything should be connected in the same network
3. Connect between SONOS CONNECT with AVR using digital or analog cable

# Specification of our “Works with SONOS”

4. Play the music via SONOS app

5. AVR automatically
- wake up
  - change the input
  - set the volume level
  - play the music

# Setup menu

## SETUP / SONOS

- |    |                  |                       |
|----|------------------|-----------------------|
| 1. | Works with SONOS | ON / OFF              |
| 2. | Sonos Device     | Dining (192.168.1.10) |
| 3. | Input Selector   | AUX                   |
| 4. | Output zone      | Main and Zone2        |
